

Writing Assignment 2

A primary review article is an article that reports on new research findings and is characterized by its sections. A primary review article will usually have an introduction, method, results, discussion, and references section. A primary article is usually peer-reviewed. A peer-reviewed journal is an, “Articles are written by experts and are reviewed by several other experts in the field before the article is published,” (“How to recognize peer-reviewed journals”, 2019) A primary article is not to be confused with a review article. A review article is a secondary source that “summarizes the research literature on a particular subject.” (“How to recognize peer-reviewed journals”, 2019) A review article often helps make topics easier to understand by summarizing research in a subject.

A peer review process is important. When an article is peer reviewed it can improve the article in several ways. “Reviewers may point out gaps in a paper that require more explanation.” (“Peer review process”, 2019). Reviews could also make suggestions to help make an article easier to understand.
