Watch this video and think about how the career of digital forensics investigators relate to the social sciences. Write a journal entry describing what you think about the speaker's pathway to his career.

I think the speaker's pathway to his career is very eye-opening and honestly comforting. He said early on in the video that there wasn't a digital forensics major, or anything like it, while he was going to college so he went a different pathway. That didn't stop him from following what his passions were or what he thought was cool enough to spend time on. Most cyber and technology programs are new, but the fact that someone who has an important job, such as the speaker, had a completely different pathway at first than the job he is very clearly passionate for shows that cybersecurity and technology are truly everywhere.

I have had many professors tell me that I will have many different job titles in my life and it will be important to explore all of the opportunities my degree will open up for me. Starting college was really tough because I feel like I'm still just a kid and having to choose what I'm going to do for the rest of my life carries a very heavy weight. Luckily, I know what I am good at and what my interests are. It is still comforting to know that the speaker has still managed to become successful in a job field that he has passion for knowing that he went to college for something that virtually has no relation to it. It makes me feel like I still have time to figure out my life even though I have a general direction.
