I chose this TikTok video after scrolling through during the search of “cell biology memes” because it aligns well with my initial opinions and expectations of this class. Although it is a college-level course, I expected it to be much simpler in detail, perhaps a good review of cells’ anatomy and functions. Even though it is very complex (despite the attitude in the video), I am not frustrated or disappointed with the course material. I underestimated the difficulty and detail that goes into this course, but it has made me such a contemplative scholar throughout the year. As a biology major, it ties together very well with my other classes I am currently taking, which I believe makes me understand all the material much better. I can visualize the “big picture” connections, and it makes me proud when I recognize them.
