

One significant task that was mentioned in the video relating to social cybersecurity is working with employees of the organization to train against simple attacks. She mentions that since you are in an entry-level job, it is expected that you will find yourself educating employees of the organization to prevent simple and avoidable attacks like phishing or social engineering. Additionally, assisting with vulnerability remediation may be another task assigned to entry-level cybersecurity workers that may involve working with a team. In conclusion, it seems apparent that having the willingness to work with other cybersecurity experts and educate employees is a significant factor in this field.
